SHELTER TERMS OF SALE & ASSUMPTIONS

1. COMPATIBILITY WITH OTHER SYSTEMS

- a. While the SHELTER network components, including the 9KX lock, fob and repeater may be capable of being configured via input and output relays to allow the fob to initiate a signal to many third party access control system or alarm system, allowing communication with first responders, Stanley has not tested these systems and cannot guarantee the accuracy or performance of the Shelter components with third party products. Stanley recommends that you work with your third party integrator to determine compatibility and performance of the system. Stanley shall have no liability or obligation for additional products or services provided or delivered by a third party.

3. SHELTER SYSTEM BATTERY BACKUP:

- a. The Shelter system relies upon the gateway and repeater components to be hard wired to a power supply in order to receive a signal from the FOB and transmit signal to the 9KX or for the repeater relays to function properly. Therefore, it is strongly recommended that the gateway and repeater have a battery backup in place. In the event of a power loss at the gateway or repeater the Shelter system may not function properly.

4. SIGNAL:

- a. A FOB is typically capable of sending a signal up to 200 feet away to reach a gateway or repeater.
- b. A 9KX lock is typically capable of receiving a signal up to 400 feet away from a gateway or repeater.
- c. A repeater is typically capable of receiving a signal up to 400 feet away from a gateway.
- d. The distance of signal may vary depending upon building construction. Proper testing of all FOBs is recommended to ensure signals are being properly sent and received to the gateway and to understand the scope of where a lockdown can be initiated both inside and outside of a building.

- e. Signals cannot be guaranteed at the exact time a lockdown is initiated. Frequent self tests are recommended to ensure proper performance of the system.
 - f. All wireless devices should be installed with consideration given to nearby metal objects. Performance could be impacted.
- 5. SIGNAL DELAY:**
- a. Typical lockdown response time is 10 to 20 seconds from the initiation of a signal. Typical lockdown clear response time is 10 to 20 seconds from the initiation of a signal. However, certain conditions could impact this delay.
- 6. SIGNAL CONFIGURATION:**
- a. Each 9KX lock and repeater can be programmed to include an additional delay anywhere from 1 to 60 seconds after the receipt of a signal (over and above the 10-20 second typical response time).
 - b. 9KX LED/Sound Configuration: LED and sound configuration options can be disabled from the Shelter System. Please note if these options are disabled the user will not have any visual or sound confirmation that the 9KX lock received a lockdown signal.
- 7. OPEN DOOR:**

If a door is open when a lockdown is initiated it will still revert to a locked position but will need to be manually closed to restrict the area.
- 8. RIGHT OF EGRESS:**
- a. The Shelter system has been designed to prevent entry into a room when a threat is present, however, the inside lever of the 9KX will not lock which will allow for a right of egress at all times. You will always be able to exit a room, even during a lockdown.
- 9. MECHANICAL KEY:** even during lockdown mode a mechanical key will still be able to operate the latchbolt and open a door. End Users are encouraged to maintain security and control of mechanical keys at all times.
- 10. INTERNET CONNECTION:**
- a. The Shelter System is offered with a Gateway Cloud Service to set up, configure, test and monitor the Shelter system. An internet connection is required to set up and configure the Shelter System. While use of the Gateway Cloud Service is recommended to get the best use out of your Shelter system, it is not required. Users can log on to their gateway via a local network connection to perform minimal configuration and management of the Shelter system. Not all features and functions of the software are available via the local gateway.
 - b. A local internet connection is not required to initiate or clear a lockdown if repeater inputs have been configured to perform an all clear of the lockdown,
- 11. TRAINING, TESTING, USE, DRILLS**
- a. Frequent testing of the Shelter System is strongly recommended, including scheduled self testing via Gateway Cloud Service.
 - b. Any changes to building construction or layout should be followed up with proper testing.
 - c. Any further addition of wireless devices to the building should be followed up with the proper testing.
 - d. Any changes in staff or personnel who are holders of a fob should be followed up with proper testing and training.
 - e. Any changes in products connected or integrated with the Shelter system should be followed with proper testing.
 - f. Once a door is locked it can still be manually opened on the inside to allow entry for those individuals who were not able to access the area prior to the lockdown. Users should have appropriate training and security plans in place to secure persons who are not able to enter an area prior to the lockdown being implemented.
 - g. Testing of the Shelter System without the Gateway Cloud Service will be a manual effort and not allow you to test all function or capabilities.
 - h. Final testing may result in the need for additional products, including gateways, repeaters, fobs, etc. Stanley Site survey tools may provide an initial recommendation on products needed, however, each end user is responsible for working with their own facility management, distributor or third party integrator to determine final products required to ensure proper performance of their Shelter System. Stanley does not guarantee the accuracy of any site surveys.
 - i. As conditions to the end user's environment changes, additional equipment may be required. Stanley is not responsible for providing additional equipment as end user's conditions or environment changes.
- 12. Multiple FOB Use:** it is highly recommended to test a facility with the maximum amount of FOB users at the same time to ensure proper performance of the Shelter System. If delays or performance impacts occur please contact your Stanley Representative for recommendations.
- 13. FOB Battery:** FOBs should be regularly tested to ensure proper performance of the FOB and Lock. Battery life needs to be monitored and managed.
