**STANLEY SECURITY SOLUTIONS UPGRADES KEY AND CORE MANAGEMENT SOFTWARE FOR ITS KEYSTONE® 600N5**

***Enhanced Version Offers Increased Security, Performance, Convenience and Functionality with the Ability to Operate Within a Network Configuration***

**Indianapolis, IN – September 25, 2006** – Best Access Systems, a division of Stanley Security Solutions, Inc., and a provider of integrated access and security solutions, today announced that the BEST® Keystone® 600 network key management software has been upgraded for optimal performance and operability. The BEST® Keystone® 600N5 key and core management software offers all of the same security, convenience and functionality of the original BEST® Keystone® 600 network key management software but with the added ability to operate in a network configuration, enhanced for larger sites.

The BEST® Keystone® 600N5 key and core management software supports multiple users in different locations simultaneously with password restricted logins that enable administration staff to restrict an individual's access for designated cards and functions. New features of the BEST® Keystone® 600N5 software include:

- Mass deletion of employee, key and door information
- Added Service for importing and appending data
- Improved performance for quick searches, including added finders
- Activity log that tracks user transactions

“Keeping track of thousands of keys formerly required an extraordinary attention to detail and endless supply of patience,” said Bill Gannon, software engineer for Stanley Security Solutions, Inc. “The BEST® Keystone® 600N5 key and core management software is a dynamic record management system designed to simplify the management and utilization of keys, cores, doors and users within a facility. The software can be quickly accessed and reviewed in an easy-to-navigate user screen and can then be transferred into user friendly reports.”

## **Buildings**

Designed to support multiple facilities, the BEST® Keystone® 600N5 key and core management software will display the doors, cores and locks within an individual building. The software also displays the people, keys and departments with access to a building as well as lists departmental access, designating the people, keys and key rings that are able to access that department for easy management.

## **Cores & Doors**

The BEST® Keystone® 600N5 software provides at-a-glance core management that lists all of the cores within a building as well as cores in each door and cross-references them to the employees, keys and departments in the database for aberrations. Door management is made easy with the BEST® Keystone® 600N5 software as it displays a facility's doors, providing information on the cores, locks and other items specific to each door as well as the people, keys and departments that can access each door.

## **Locks**

The BEST® Keystone® 600N5 key and core management software displays the locks and lock locations within a facility as well as the people, keys and departments with access to each lock. Additionally, a manufacturer's product records are detailed next to the locks they are specifically connected to.

## **Keys**

The BEST® Keystone® 600N5 key and core management software lists all the keys that have been issued as well as the key holders. It also records the issuance of keys, key rings, cores and locks to people. Furthermore, the BEST® Keystone® 600N5 software maintains historical records on all keys, key rings, cores and locks with an added feature that lists all keys and items that are due back or in need of return. Additional key management features include:

- Maintains historical records on all keys, key rings, cores and locks
- Shows all "key rings", key ring holders, and the buildings, cores and doors each key ring is able to access
- Maintains "key cabinet" records displaying the keys, key rings and locks located on a "hook"
- Tracks "out-of-service" keys, key rings and other items that are lost, stolen or destroyed
- Displays the cores, departments, doors and buildings a key can access

## **People**

The BEST® Keystone® 600N5 key and core management software displays each individual and connects them with their assigned keys, key rings, cores and locks. Additionally, those who have been deleted from the database are maintained on a list in which users are able to quickly reactivate an individual. Furthermore, specific information is at one's finger tips with enhanced searches, which quickly identify and display people by name, ID, department, title and type. For streamlined system operation, the software cross-references the databases for anomalies, connecting people to the proper cores, doors and buildings that they can access.

## **Software**

For easy use and maximum operability, the BEST® Keystone® 600N5 software was designed with a variety of software features include:

- Automated and manual pin segment calculator
- Comprehensive list of reports available as an on-screen menu
- Built-in and easy-to-use program for backup to any mapped drive
- Display date of last backup
- User lists of who made backups with dates
- Dynamic searching capability for all records
- Large note field on all card records
- On-screen indicator showing when historical information is present for a record
- On-screen indicator appearing when notes are present on a record
- Ability to operate in an NTFS network environment with TCPIP protocol
- Multiple users can accessibility to the program at the same time

Designed to operate over current network environments including Windows® NT, XP, 2000 and 2003 servers, the BEST® Keystone 600 and 600N software users can easily upgrade to the BEST® Keystone® 600N5 software version without risk of losing existing data as it is automatically uploaded and converted into the new format during the installation process.

## **About Stanley Security Solutions**

Stanley Security Solutions, a business division of The Stanley Works, is a provider of integrated access and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
