

April 2007

Today's security environment has become a delicate balance between state-of-the-art technology and user-friendly operation, between the efficiency of a system and the ability to maintain it. Stanley Security Solutions (SSS), a global solutions team, is designed to respond to these challenges in better and more efficient ways. Stanley Security Solutions offers dozens of industry-leading brands, hundreds of mobile service units and thousands of dedicated employees to partner in every area of security needs.

"Together, all Stanley Security Solutions divisions offer an integrated support structure that pools resources and shares expertise," says Karen Pugliese, vice president general manager, Central Canada, for the Frisco Bay division of Stanley. "This is even more critical today as customers look to integrators for expertise in both technology and application. Organizations need security partners that will assist them in developing a comprehensive solution that will meet their requirements today, and for the next five years."

Stanley Security Solutions is focused on developing products and services to facilitate operations.

The NT-500 and HBV 400, are out-of-the-box integrated access control and digital video solutions. There are virtual guard tours that leverage IP security cameras in order to focus guard services on required responses. Managed security solutions provide day-to-day remote management of access-control systems allowing organizations to have employees focus on value-added tasks. Remote video-support services optimize business customers' overall surveillance program.

"With the acquisition in January 2007 of the American corporation HSM Electronic Protection Services – the fourth largest electronic security company in North America, Stanley becomes one of the most impressive providers of comprehensive solutions in the security industry," says Pugliese. "This further solidifies our position as a provider of world-class security solutions to customers — all with a vision of the future." ■
