Low Energy Power Operator Meets ADA Requirements

Stanley Security Solutions Inc. of Indianapolis, a provider of integrated access control and security solutions, announces the release of the D-4990 Low Energy Power Operator for entrances and automatic door applications. In addition to enhancing flexibility by incorporating a variety of accessibility applications, the D-4990 was designed to be in strict compliance with the directives of the Americans with Disabilities Act (ADA).

The D-490 combines Stanley Access Technology's motorized opener with the Stanley D-4550 heavy-duty door closer. According to the company, even without electrical power or power failure, the D-4990 eliminates the excessive push/pull force typically required for most operators.
