Biweekly Intelligence Tracking Cutting-Edge Practices, Trends And New Technologies For Security Executives

□ **Stanley Security Solutions**/Indi-
anapolis will design and install an ac-
cess control and integrated security
system covering public
buildings in Colorado
Springs, Colo. Those
facilities include office
buildings; warehouses;
and wastewater, elec-

tric and natural gas utility plants. The security system will include all of the usual components: CCTV, digital video recording, a photo ID system, electronic door hardware, fencing and outdoor sensors. Previously, Colorado Springs ran separate security systems at each site, but city officials decided they wanted a “unified and integrated security system,” said **Mark Meisen**, manager of business development for Stanley. City employees will “carry and use a single card for all access points” in the new security network, he added.
