## **Precision Hardware announces new Weatherized Exit Device**

Adding to its line of high quality exit devices, Stanley Precision Hardware, a division of Stanley Security Solutions, Inc., today announced the introduction of a new egress control system. The Stanley[R] Precision Hardware Weatherized Exit Device is specifically designed to endure regular and repeated exposure to varying climates, temperatures and weather conditions. As a result, the Weatherized Exit Device is the ideal egress control solution for exterior and semi-exterior applications, such as home and garden centers, lumber yards and growing facilities, whose primary business operations are based in an outdoor setting. "Essentially, we added a weatherized alarm and touchbar switch to our already well accepted exit device. The similarities between our interior and exterior device end in their reliable function.

Testing proved the Weatherized Exit Device is built strong, functioning perfectly in the most extreme environments, enduring both frequent and infrequent wet, dry, freezing and salty conditions," explained Michael McCoy product manager for Stanley Precision Hardware.
