### Door closer

Precision Hardware of Romulus, Mich., a division of Stanley Security Solutions Inc. of Indianapolis, added the Door Closer by Ryobi Group of Japan into its line of door hardware products. The cylinder body component is constructed of R-14 die cast aluminum alloy, to resist wear from contact with the piston during the opening and closing cycle and hold it stable against hydraulic pressure. The steel piston body has a 1.5-inch diameter, and the pinion shaft features  $\frac{1}{8}$ -inch teeth. Internal steel springs allow for a greater adjustment range. The Door Closer comes in a variety of standard arm options, all featuring a forged main arm that provides high strength with a reduced profile. It is non-handed, reducing stocking requirements, and available in a variety of finishes.
