### **STANLEY SECURITY SOLUTIONS INTRODUCES THE IDH MAX® 1300 LOCK**

#### ***New Electronic Locking System Offers a Comprehensive and Cost Effective Solution***

**Indianapolis, IN – March 29, 2006** – Adding to its line of high quality mechanical and electronic access systems, Stanley Security Solutions, Inc., which provides access control and integrated security solutions, announced today the new IDH MAX® 1300 lock. Instead of installing reader devices, electrified strikes, door contacts and request-to-exit devices (RQE), users can now install the BEST® IDH MAX® product in cylindrical or mortise lock applications.

The IDH MAX® 1300 system offers convenience and efficiency for electrical lock applications. All of the formerly separate components required to control access, including PIR, RQE push buttons, door contacts, and electric strike are now housed in a single, attractive hardware package with only the lockset being visible at the door. Even the Intelligent System Controller (ISC) is secured and out of site, embedded behind the escutcheon.

“Typical electronic lock installations are time consuming and complex, requiring a separate wiring for each individual component and the result is rather unsightly,” said Jay Vaitkus, product and market manager for Stanley Security Solutions. “With the IDH MAX® 1300 unit, Stanley Security Solutions designed an electric lock solution with a full set of features that is not only attractive and easy to install but cost effective as well.”

Available with magnetic stripe, or proximity card reader technology, the IDH MAX® 1300 lock integrates the reader technology into the lockset escutcheon. The proximity card reader can be HID and Motorola/Indala proximity card supported and compatible with Weigand, ABA and custom formatted proximity cards. It can be used in interior and exterior applications and is UL listed for GYQS electrically controlled single point locks or latches.

With the IDH MAX® 1300 lock, installation time is greatly reduced as only one four conductor wire run is required, drastically reducing the complexity of multiple wire runs. The IDH MAX® 1300 lock operates with the BEST® interchangeable core as a mechanical override and integrates with the B.A.S.I.S® system and the Mercury on-line EAC equipment. Mechanical options include cylindrical or mortise latches in all popular lever/knob styles and finishes.

### **Mortise Features**

The heavy duty design of the mortise lock makes field maintenance easy and reduces the risk of part failure. All sensors are standard in the IDH MAX® mortise locks, with the door contact, RQE, and latch status sensors positioned inside lock case. The ISC is embedded behind the escutcheon and the door contact magnet is installed behind the strike – both secured and out of site. Additional features include:

- Lock case meets the requirements as listed in the ANSI/BHMA A156.13 standard for Series 1000, Grade 1 Operational and Grade 2 Security locks;
- UL listed for GYQS electrically controlled single point locks or latches for use on 3 hr, A label doors (4' x 10'). The listing applies for both U.S. and Canadian applications;
- Twist-off lever spindle design protects internal lock parts from damage and failure; and
- Oil impregnated stainless steel 3/4" anti-friction latch bolt reduces door closing force and wear.

### **Cylindrical Features**

IDH MAX® 1300 cylindrical locks are cost effective and, with non-handed levers, easy to install. Standard in the IDH Max® cylindrical locks are RQE and door contact sensors. The RQE sensor is secured inside the lock trim and embedded behind the escutcheon. Additional features include:

- Lock chassis meets the requirements as listed in the ANSI/BHMA A156.2, standard for Series 4000 Grade 1 locks; and
- UL listed for GYQS electrically controlled single point locks or latches for use on 3 hr A label single doors (4' x 10') GYJB. The listing applies for both U.S. and Canadian applications.

### **About Stanley Security Solutions**

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access control and integrated security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
