MEMPHIS-SHELBY COUNTY AIRPORT AUTHORITY TAPS STANLEY SECURITY SOLUTIONS

Indianapolis, IN – May 4, 2005 – Stanley Security Solutions, Inc., a provider of access control and security solutions, today announced that it has been awarded a contract to develop and install a perimeter intrusion detection system at the Memphis-Shelby County Airport Authority.

The project includes the enhancement of security for approximately 10,303 meters (34,000 feet) of the existing Memphis Airport security fence line. The proposed system will consist of 64 Fixed Day/Night Cameras along the perimeter fence line which will be analyzed by the Object Video VEW system.

Stanley Security Solutions assembled a team of industry experienced firms to survey and design a solution to best meet the requirements of the project. As a result, the scope of work will include the following components:

- Integration and expansion of the existing Closed Circuit TV System
- New technologically advanced high sensitivity day/night cameras
- Deployment of the Object Video Intelligent Video Surveillance System
- Installation of a perimeter fiber optic cable infrastructure
- The application of infrared illumination where required
- Electrical engineering design firm

Strategically placed Pan/Tilt/Zoom cameras will be used to augment the verification and general surveillance requirements of the system. Both a Single and Multimode Fiber Optic backbone will be installed around the perimeter to support not only this project but more importantly, future growth of the system.

The overall system design features the use of Object Video's *Video Early Warning* product to pro-actively detect perimeter security threats in this area and then alert airport and law enforcement authorities to them. VEW represents the current state-of-the-art for video-based threat detection technology, both in terms of its algorithm sophistication and, equally important, its operational hardening and user friendliness.

The perimeter intrusion detection system that will be installed at the Memphis Airport is commercially available and is currently being deployed by the Department of Homeland Security's Bureau of Customs and Border Protection to provide intrusion detection at several ports of entry along both northern and southern U.S. borders. It has also been successfully installed at several other Airports within the U.S.

"For obvious reasons, airport security has become a 'front and center' issue in this day and age," said Justin Boswell, president of Stanley Security Solutions. "It is particularly rewarding for us to be selected by Memphis-Shelby County Airport Authority to provide a mission critical security infrastructure that can potentially function in a life saving capacity. This is a key validation for the crucial role that Stanley Security Solutions is playing in the security industry as the demand for reliable and effective security solutions continues to increase in all market sectors."

About Stanley Security Solutions

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
