Stanley Security Solutions

The HBV400 video-management solution version 9.7 from Stanley Security Solutions, Indianapolis, is a PC-based, hybrid digital-video-recording system designed to support up to 32 analog cameras and IP cameras, which can be added in increments of 4 with up to 32 per system. To provide the fastest performance, it features an upgraded PC platform with dual core processors. Open architecture provides the benefits of a user-friendly interface. Additional new features include: improved noise filtering in motion detection providing increased accuracy of motion detection; ease in setting motion sensitivity correctly with motion trails and motion highlights; multiple pan-tilt-zoom (PTZ) camera tours with schedule; ability to remotely move a PTZ camera to a different position.
