Stanley Precision Hardware's Weatherized Exit Device is specifically designed to endure regular and repeated exposure to varying climates, temperatures and weather conditions. The egress control solution can be used in exterior and semi-exterior applications, such as home and garden centres, lumber yards and growing facilities. Similar to standard interior egress control devices, operation of the touchbar initiates an auditory alarm and triggers a switch that sends a signal to an offsite location, such as a monitoring station, alerting personnel of unauthorized egress.
