### **STANLEY SECURITY SOLUTIONS OFFERS SCHOOLS CRITICAL LAYER OF CLASSROOM SECURITY**

#### ***Intruder Function Device Enables Teachers to Mechanically or Electronically Secure Classroom Doors from Interior***

**Las Vegas (ASIS Show) – September 24, 2007** – Stanley Security Solutions, Inc., a provider of integrated access control and security solutions, is pleased to offer the Stanley® BEST® 9K®-IN cylindrical, 40H-IND, 40H-INL mortise lock and Precision Hardware™ Apex™ Series 10 and 14 function exit devices, all of which have been designed to accommodate emergency response predicaments with a classroom intruder feature.

With the classroom intruder function, teachers can mechanically or electronically lock the exterior lever from the interior side of the door. In doing so, this feature enables school staff to draw very little attention to the opening while quickly creating a substantial security barrier for the students inside.

The security-enhanced series of locking solutions comes at a critical time in the United States' educational arena. With an increased level of scrutiny being applied to the security of educational institutions, particularly in the wake of recent episodes of violence on school campuses, the classroom intruder feature was designed to provide teachers with in-the-classroom expediency options when dealing with intrusive violence.

“The ‘classroom intruder’ product series provides educational facilities with the best of both worlds – strong classroom security combined with continued uninterrupted egress from the exit device or lockset,” said Mike McCoy, product manager for Stanley Security Solutions.

“We’re seeing growing demand for increased classroom security in the wake of the Virginia Tech and Columbine High School violence, with schools seeking the ability to use either a key mechanically or switch activation to lock the outside door without drawing attention to the classroom.”

These “classroom intruder” products always allow for convenient emergency egress from inside the room, since the inside lever or pushbar always remains unlocked. Importantly, teachers cannot be locked out of the room during normal classroom hours.

Other classroom intruder function product features include:

- The exit device “10” Function option enables the user to mechanically lock or unlock the outside trim with a key on the 2110 Rim Device or the 2310 Mortise Device
- Users can electronically lock or unlock the lever with the E-2103 or the E-2303 lock device
- The Stanley® BEST® 9K®-IN cylindrical, 40H-IND, 40H-INL mortise lock and Precision Hardware™ Apex™ Series 10 and 14 exit devices conform to most local fire and safety codes
- All are heavy-duty locks and exit devices, are UL-listed and meet ANSI 156.3 Grade 1 requirements
- The interchangeable core and master-key system allow for quick keying changes and can also be sold as a kit for field installation on existing facilities

### **About Stanley Security Solutions**

Stanley Security Solutions, a business division of The Stanley Works, is a provider of integrated access control and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
