## **BROADMOOR HOSPITAL SELECTS STANLEY SECURITY**

**INDIANAPOLIS**—Stanley Security Solutions, a provider of access control and security systems, has announced it has won an order to install its Minder® staff protection system at Broadmoor Hospital. The hospital, which houses approximately 400 patients that require a specialized level of security, is one of three high-security hospitals in England, known as the Special Hospitals. The contract was initiated and finalized through Stanley Security Solution's Blick Communications division.

The Minder staff protection system is widely used in psychiatric intensive care units, mental health hospitals, youth offender establishments and prisons. Hospital staff members carry a small mobile device, which functions as both an alarm transmitter and a radio pager. When an alarm is activated, all or a select group of devices are called, and the location of the alarm is displayed on the Minder mobiles.

The control equipment at Broadmoor Hospital has been completely duplicated to ensure that the hospital is never without its staff protection system.
