Stanley Security Solutions Wins Contract With Colorado Springs Utility

Nov 01, 2005, INDIANAPOLIS -- Stanley Security Solutions announced that it has won a comprehensive security "design-build" contract with the city of Colorado Springs, Colo. The project, called the Enterprise Wide Security Enhancements project, calls for Stanley Security Solutions to design, develop, install and service a suite of integrated access control and security solutions for Colorado Springs' joint network of utility and energy installations throughout the city.

The project includes the city's entire energy infrastructure, including office/warehouse facilities, waste water facilities, electric transmission and distribution sites, as well as its electric and gas plants.

Specific components of the project include access control, CCTV, digital video recording, networking and fiber optics, photo ID systems, electronic door hardware, and perimeter site protection.
